Manufacturing Center
Add:1F of Building 3, Run Heng Ding Feng Innovation Park, Liu Xian Er Rd, No.1,
Xin'an Street, Bao'an District, Shenzhen, China;
1F, 2F of Factory Building, No.6, Huachang Road, Songshan Lake Park,
Dongguan, Guangdong, China

Precise Diagnosis Solution for Mammography Screening!

Nowadays, breast disease is one of the most common disease affecting women’s health, both mentally and physically. A growing number of women are going for annual mammography screening program for early stage breast cancer diagnosis. If breast cancer detected at an earlier stage, the possibility of saving lives is much higher. Our mission is to help to detect breast cancer early and save more lives.

We are committed to offering our digital flat panel mammography solution that help to provide exceptional care with confidence, early detection and optimal diagnostic accuracy.

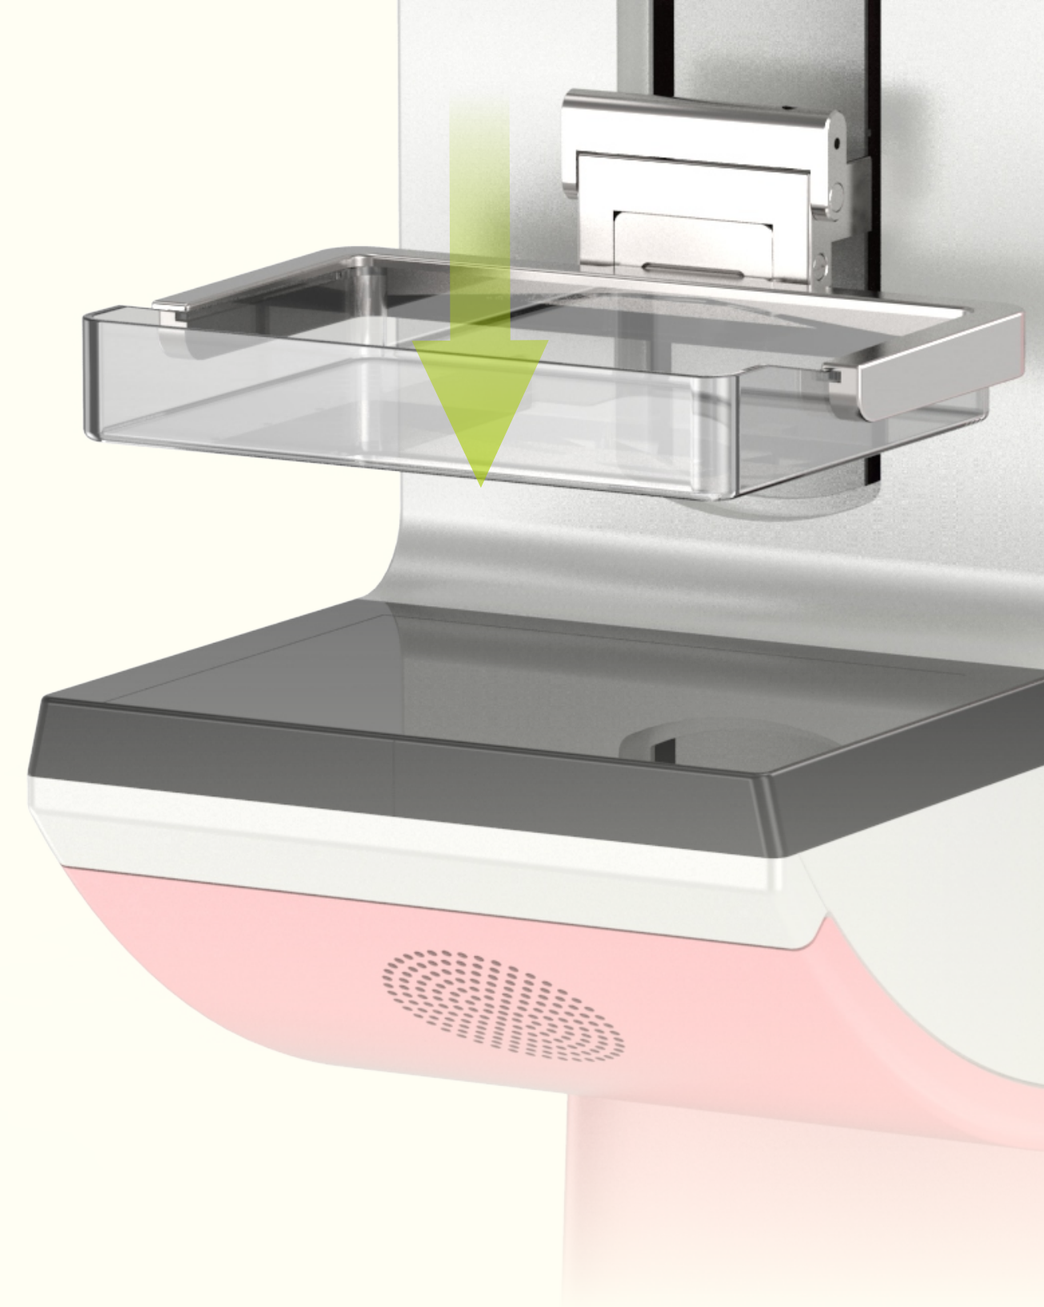

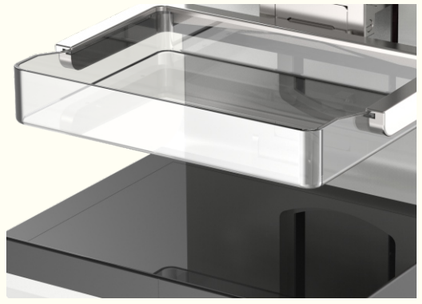

High Performance Workflow for Relaxing Patients!

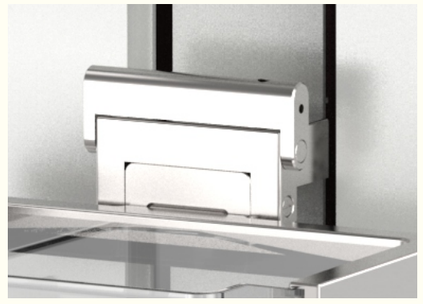

The round edges of the compressor could avoid skin scratch and make the system easy and comfortable to access, which provides a warm, more comfortable experience between the patient and image receptor and helps patient relax pectoral muscle. This allows the radiographer to position the breast for screening easily and quickly, reducing the need for retakes speeding up workflow, and improving the patient's experience.

After exposure, the compressor will be uplifted automatically to decrease the compression time of patient. Patients could release compressor by themselves by using the compressor releasing switch at any time. This provides a patient-controlled environment, greatly reducing discomfort.

- Less time under compression to improve patient comfort,lowering the risk of retakes.
- Ergonomic X-ray exposure footswitch helps to reducerepetitive motion injuries.

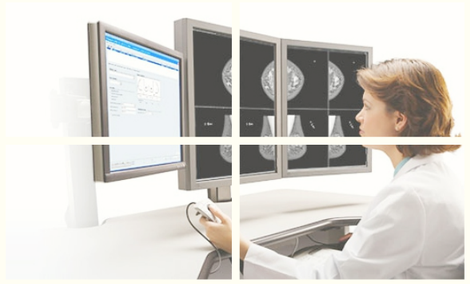

Extienda la atención con confianza!

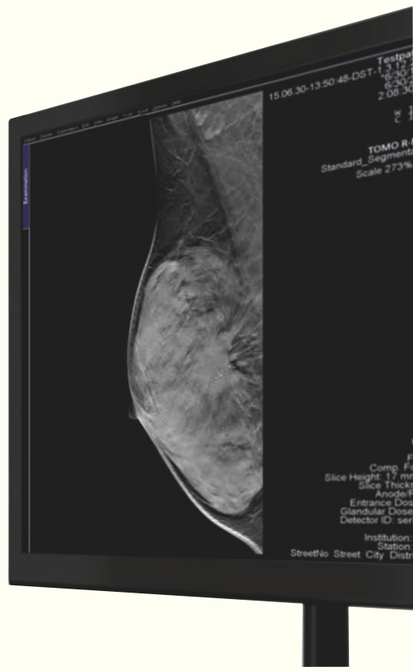

DM156 is equipped with flat panel detector, generator, x-ray tube and compressor. It’s able to capture ultra-fine targets in imaging and find the small lesions, providing:

- Excellent image quality with the large size detector.
- Simpler workflow by moving to the next view with only one touch.
- Simpler workflow by moving to the next view with only one touch.

Outstanding Image Processing!

DM156 is equipped with advanced image processing software to enhance your image quality. Innovative image enhancement features help you see more detail to give you greater confidence with your diagnosis.
The processing software is one-stop system that brings together the entire radiography workflow including registration, examination, post-processing and documentation.

- Automatically process images after acquisition.
- Reduce image noise, improve soft tissues detail.
- Intuitive and easy-to-learn user interface.
